and Faculty of Social Sciences, Radboud University, NL

on Friday 29th March 2019

in Room 44 FHS

09.00 – 12.00/13.00 – 15.00

RSVP – marie.c.stock@um.edu.mt

Prof. dr. Ronald Batenburg studied Sociology at the Utrecht University and obtained his PhD in 1991 from the University of Groningen. Subsequently, he worked as a researcher at the Social Cultural Planning Bureau and Utrecht University, and as assistant/associate professor at Tilburg University, Raboud University and Utrecht University.

Prof dr. Batenburg has been working at the Netherlands Institute for Health Services Research (Nivel) in Utrecht since 2009, as a program leader in Health Workforce and Organization Studies Health Care. He is concerned with the availability of sufficient health professionals in the future: what solutions are there for possible shortages in the future? What is the role of ICT, innovation and the changing organization of care in this regard, and how do health education programs meet the changing care demand?

Prof. dr. Batenburg has also been appointed to the position of Professor by special appointment of health workforce and organisation studies at the Radboud University Faculty of Social Sciences since May 2017. The chair connects with the research of the section Sociology and Social Cultural Research within the Radboud Social Cultural Research Institute. Health care as a sector, social domain and social field offers many opportunities for widening and enriching sociological research and education.
